

**OPTIMIZE
EVERYTHING,**

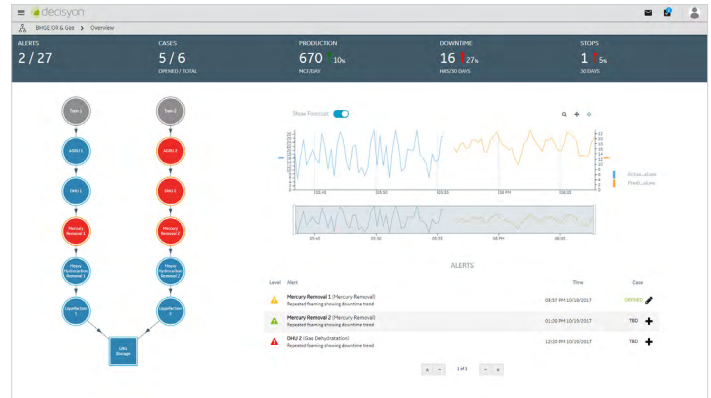

**EMPOWER
EVERYONE**

**FROM AGGREGATION THRU ACTION
EVERYTHING YOU NEED FOR YOUR IOT JOURNEY**

Decisyon App Composer (DAC) is a visual “drag and drop” development environment for rapidly building Industrial Internet of Things (IIoT) applications – coding optional. Get ready to inject real-time intelligence and efficiency into your business operations really fast. DAC leverages IoT and Platforms as a Service (PaaS) to accelerate the creation of smart digital solutions.

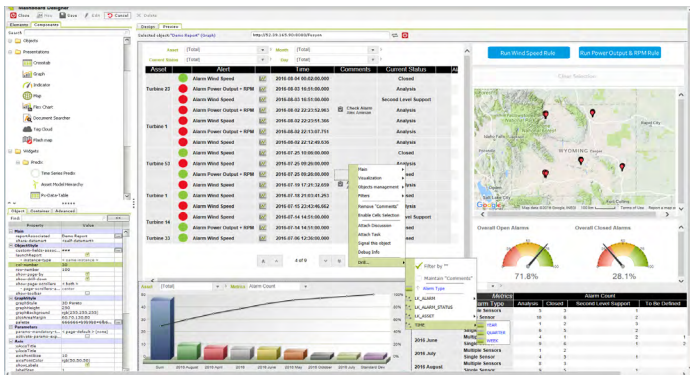

No time to build from scratch? We have pre-built, off-the-shelf solutions for many industries and business applications that are scalable and modular. Our solutions can be easily configured in the verticals of Manufacturing, Consumer Goods, Pharma, Renewables, Oil & Gas, Aviation, and more, to meet your specific needs. Or, talk to us about leveraging Decisyon’s development resources and expertise to help you build a customized solution in just a few weeks.

DAC is designed from the ground up to enable businesses to easily design and modify scalable industrial grade IIoT

solutions that run on any PaaS, freeing you from monolithic, hard-coded products that utilize lengthy and costly development cycles, giving non-technical people the ability to rapidly build solutions with in-the-box products. It also eliminates IT development queues, meaning that you’ll spend more time deploying solutions, solving business challenges, optimizing processes and identifying new opportunities that put you ahead of the competition.

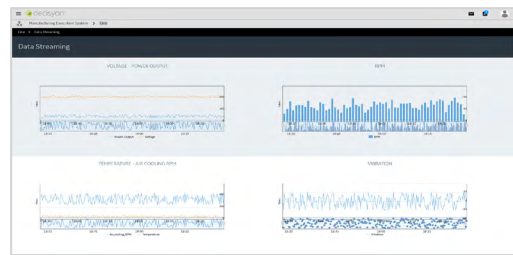

You can deploy DAC on different cloud services, host your solutions on nearly any public or virtual private cloud (VPC), including AWS, other PaaS platforms such as Predix, or on premises in your own data center. It works as an enabling layer that empowers everyone to leverage all underlying PaaS capabilities in conjunction with all Decisyon native services, accelerating time to develop, deploy and achieve the desired business outcomes.

With DAC, you can be more responsive and efficiently consume, analyze, share and execute on all the data you receive. As your business needs change, DAC enables rapid adaptation and application change, enabling you to make smarter decisions faster and giving you an immediate advantage in the market.

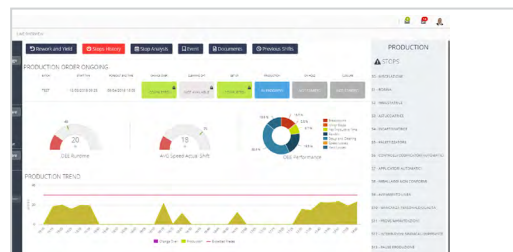

It's All in the Box

DAC removes friction at every step in the development and deployment process, by providing you with all of the functionality required to aggregate, visualize and analyze data, and then execute on it to make the smartest decisions – in real time. DAC provides unique in-context collaboration features around the data to run what-if scenarios in real time to jointly make decisions and take action. DAC offers a comprehensive catalog of micro-services and widgets (including third parties and our partners) and has an open, scalable architecture so you can leverage external services that complement native functionality. One or multiple users can work in parallel, rapidly constructing robust solutions pages in just minutes -- visually with no coding, by simply dragging and dropping widgets and services onto a canvas. We've radically simplified solutions creation, so you can deliver at a fraction of the time and cost. We've made it easy: use DAC's extensive, built-in capabilities as is, customize them, or trade modules in or out.

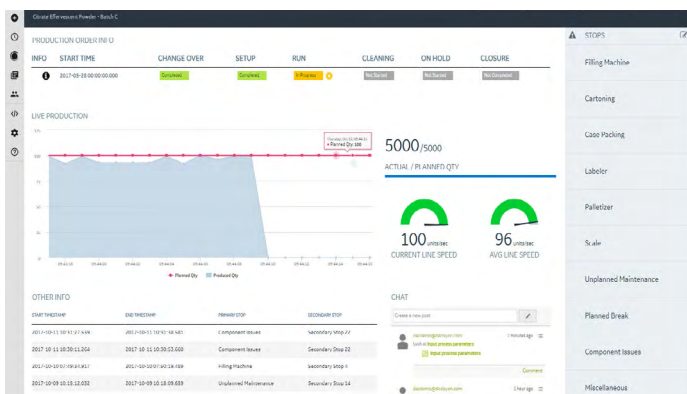

Workflows, Rules and Learning – Enhance Your Own Processes

Digitize and recreate your production process using DAC workflow management capabilities. Unify and automate your business rules into a single environment that facilitates extracting actionable insight and rapidly take action.

Complete, Customizable Analytics, Visualization and KPIs

Adopt your own KPIs and adjust the performance indicators as needed. Perform BI anywhere, anytime, in a unified framework with a simple right-click. DAC provides extensive built-in BI capabilities (reports and dashboards, data analysis, OLAP, ad-hoc analysis, metrics, KPIs, predictive analytics using services, etc.) and flexibility by supporting third party BI tool integration such as Tableau and QlikView.

Bring Your Own Data: Connectors, API & Service Orchestration

We provide everything you need for the entire IoT journey – from data aggregation to insight, decision and action. Pull together and orchestrate relevant data and microservices from your connected devices, cloud services, business systems, social media and other channels for analysis at the right time.

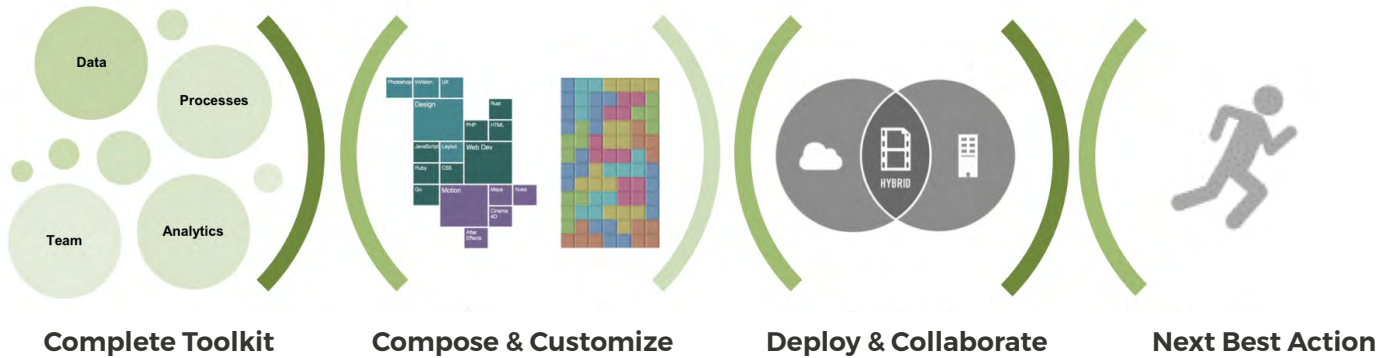

- **Ingest and operate on IoT real-time data, together with the structured and non-structured data required to manage a full business process.**
- **Use predefined connectors for over 30 SQL and NoSQL databases.**
- **Connect to Web Services (REST and SOAP) and Flat files (Excel, CSV and XML).**
- **Leverage data federation and HROLAP multi-dimensional cube to slice and dice your data.**

In-Context Collaboration : Better Decision-Making, Your Way

Motivate users to base their decisions on data and engage them in a collaborative environment to get fast action. Communicate with key stakeholders around any data point, in context, in a unique collaboration environment, make decisions in real time and act.

Take Decisive Action with Decisyon App Composer

Smart Solutions for Your Industry

We've developed and deployed many vertical IIoT solutions for the manufacturing, renewable energy, aviation, building automation, utilities, consumer goods, pharmaceutical, transportation and automotive industries. These solutions can be used right now, right out of the box, or be easily configured to meet your requirements. These solutions are delivered with all of the underlying features and functionality of DAC, so they can be quickly modified as your business needs evolve. About Decisyon

Decisyon enables business users to rapidly build solutions using a code-free visual software development environment. Our products accelerate your data journey from aggregation to visualization, insight, analysis and decision thru action. Decisyon offers the leading code-free visual software development environment for mission critical enterprise operations requiring real-time awareness and adaptability to their business operations and processes. We have developed and deployed many vertical solutions for the manufacturing, renewable energy, aviation, pharmaceutical, financial services, transportation and automotive industries. With built-in microservices such as data management, BI, mashboarding, rules engine, collaboration and execution, Decisyon offers a dramatic increase in speed to outcome for building and modifying vertical solutions. Decisyon's products and software solutions, ideally suited for IIoT applications running on any PaaS, are used in over 200 companies globally. Decisyon is headquartered in San Francisco, California.
